Meteorological conditions over the Norwegian and Greenland Seas during the cruise of R/V Oceania in summer 1987

STUDIA I MATERIAŁY OCEANOLOGICZNE, no. 58, POLAR MARINE RESEARCH
(1), pp. 41-62, 1991

Key words: meteorology, Norwegian Sea

Manuscript received April 27, 1990; in final form April 10, 1991

Abstract

The article presents the synoptic situation and the analysis of meteorological conditions during the arctic expedition of r/v "Oceania" in summer 1987. The analyzed material comprised the results of meteorological measurements collected during the cruise, facsimile charts of the ground analysis and pentade charts of the mean surface water temperature edited by the Central Bureau of Meteorology in Offenbach.
